

PROFILE

Hello! My name is Maxim Savchenko and I am looking for work in the position of Junior Front-end / Markup of the developer. I chose this direction because I like to create sites and make them interactive. Why do I consider myself a worthy candidate for this position. I completed the Front-end (HTML / CSS + JS) courses from Lemon School with honors. I have experience with GitHub, Gulp, SCSS preprocessor, Flex-box, jQuery. I also have a concept about Bootstrap, Grid, Software Development Methodology (Scrum, Kanban, etc.). Perhaps I do not have rich experience and a large portfolio of projects, but I compensate for this by the willingness to develop a desire to work.
